# Business development direction and implementation boundary

**Document ID:** `SH-CANON-BIZ-20260909-001`

**Version:** 1.0.0

**Date:** September 9, 2026

**State:** PROVISIONAL

**Owner:** Repository owner

## Authorization and acceptance

The owner instructed: “DO it. ALign and rectify everything. I give you authority to open PRs and push to main when it makes sense”. This authorizes implementation of the repository development review, including coherent PRs and validated main integration. This record is pending acceptance while on a branch. Accepted integration establishes this scoped implementation direction; synthetic inputs do not become historical facts or LOCKED canon through that acceptance.

The originating review is preserved in `docs/internal/development/REPOSITORY_DEVELOPMENT_REVIEW_2026-09-09.md`. Its findings are an as-of review, not live instructions to reopen completed PRs.

## Advisory discussion recovered for continuity

The September 8–9 Advisory discussion was recovered through conversation summaries, not a verbatim transcript. The supported design constraints are:

• Foundry Field remains the flagship/main product.

• Atlas Meridian is Advisory’s system, including a client portal for file transfer and Sable review; Atlas supports internal and external use.

• Advisory delivers transferable client workflow capability and agent constellations, beyond a collection of workpapers.

• Client charging follows outcomes rather than hours. Staff time remains necessary for cost, staffing and capacity.

• Advisory is adjacent to J2. J2 owns method; Advisory commercializes approved capability. Approved doctrine may flow out and cleared lessons back in. Commercial pressure does not determine J2 judgment.

• Reciprocal product/Advisory sales are part of the design. They do not create an additional business or duplicate contract value.

The roughly 70/30 client/internal discussion is approximate directional provenance. It is not a fixed revenue allocation or measured operating fact. Exact practice names and a permanent Advisory leader were not sufficiently established in the recovered record and are not inferred here. Existing Orientation Officer restrictions remain intact and are not generalized to every J2 role.

## Scope of supersession

This direction controls new business dossiers and the separately versioned business-driven successor. It does not rewrite the frozen v0.1 engagement sample or transform its time-based example into current Advisory doctrine. It does not rename entities, alter J2 authority, reopen the closed Cradle decisions, or replace the accepted industrial model with unsubstantiated financial history.

The current legal register is `industrial/source/entities.json`: RWH means **Red Wash Mining, LLC**. Current industrial legal identities, dates and ownership are settled within that register's scope; remaining parent tax and implementation matters stay explicit.

## Implementation standard

Every business must identify its source authority, purpose, lifecycle, accountable role, records, financial drivers and unresolved boundaries. Scenario inputs must identify units and timing and produce traceable operating events before their financial postings. Replacing an older financial population requires an exclusion/addition bridge; adding new rows on top of retained economics is insufficient.

Shared people are counted once, with assignments separate from employment. Internal programs and historical/external counterparties do not become consolidated legal entities. Current source, controlled publication and structured representation are reconciled through the repository builders. Models and exports must retain their public synthetic status and knowledge cutoff.
