SABLE HARBOR

American Resource Utility / BS&T — current business dossier

Document ID: `SH-BIZ-AMERICAN-RESOURCE-UTILITY-001`

Version: 1.2.0

As of: September 9, 2026

State: CURRENT SOURCE SYNTHESIS

Owner: Nora Ashcombe / Seth Kettering rail authority

Business and output

ARU combines railway, terminal, trucking and warehousing operations. Blood, Sweat & Tears Railway Company is the separate wholly owned railway legal entity inside ARU; nonrail businesses remain visible without inventing additional subsidiaries.

Rail service, switching/terminal handling, truck movements and warehouse services with distinct capacity, cost drivers, customer concentration and service obligations. The accepted railway estate has 40 unique route miles; route miles and track miles are different measures.

Operating lifecycle

Accept a service within qualification and capacity → plan labor/equipment/route → execute and record service → handle exception/claim → invoice → collect → maintain assets and qualified workforce.

Organization and authority

ARU totals 131: rail 58, terminal 27, trucking 24, warehouse 12 and corporate 10. The 73 nonrail/corporate billets and 58 BST billets reconcile once. Nora Ashcombe is president/COO; Seth Kettering leads rail. Fred Tolman is an external consultant.

SHI → SHIH → ARU → BS&T. Rail operating authority and commercial service management remain distinguishable. No new mine spur, custody permission or subsidiary is created by a map or revenue line.

Financial architecture

Preserve the January 7, 2026 $62 million EV transaction, $48 million stock price, $13.5 million refinancing, $22.5 million new debt and $39 million parent funding plus $1.2 million fees. Seller proceeds including excess cash are distinct from buyer stock price. Use v2 service volumes, binding capacity, margins, working capital and finance. Compare current/outside/owned logistics with the same demand.

Natural records and controls

Customer rate and service agreement; dispatch/service event; interchange/waybill or terminal/truck/warehouse movement; maintenance and qualification; payroll population; invoice and collections; covenant/debt; standalone legal and unit reconciliations.

Priority failure modes: Rail and nonrail double counts, route/track mileage confusion, allocation presented as a sampled historical invoice, unsupported demand, scarce capacity sold twice, and acquisition price/financing conflation.

The local control and interface register connects owner roles, evidence populations and existing CCF controls. Listed evidence requirements are not assertions that real controls operated.

Executable financial evidence

The business-driven successor now implements the current operating model and produces this unit's reconciled CSV, SQLite and audit workbook package. The financial design and export contract identify source events, preserved industrial references, scenario assumptions and remaining granularity. New Core economics begin in 2027; retained 2026 calibration remains explicit. Treasury schedules identify unfunded payment requests.

Operating histories and evidence

The operating successor adds dated rail, truck, terminal and warehouse allocations, maintenance jobs and equipment/crew/downtime checks. Quantities and revenue reconcile to existing service and invoice records without posting duplicate finances. Infeasible schedules remain visible; uranium custody and mine-spur authority remain independently gated.

Remaining boundaries

Historical geometry and detailed engineering remain #107; precise occupancy and semantic source dispositions remain #106/#108. Preserve accepted Geo topology while adding source-supported details.

Numerical successor assumptions remain publicly synthetic and separately versioned. Released v0.1 and industrial v2 evidence retains its original source boundary.
