SABLE HARBOR

Pale Sun / Red Wash — current business dossier

Document ID: `SH-BIZ-PALE-SUN-001`

Version: 1.2.0

As of: September 9, 2026

State: CURRENT SOURCE SYNTHESIS

Owner: Evan Vilander / Mari / Red Wash operating leadership

Business and output

Pale Sun owns Red Wash Mining, LLC through the accepted industrial legal chain. Red Wash's operating, acquisition and planning records are already substantially developed and remain the industrial source of truth.

Mine production and specialist sale under accepted operating constraints, with externally supported logistics and the developing ARU interface. RWH is a stable code, not the legal name "Red Wash Holdings."

Operating lifecycle

Plan production and qualified resources → operate and maintain → sample/reconcile product → release into authorized custody → fulfill sales → collect → fund sustaining capital and closure obligations.

Organization and authority

Pale Sun's 12 and Red Wash's 128 FTE total 140. Mari's COO/CEO dual roles occupy one Pale Sun billet. Evan Vilander is Pale Sun president from November 3, 2025. Cole's surname remains open. Counts must not be inflated by adding role appearances.

SHI → SHIH → Pale Sun → Red Wash. Ordinary inbound logistics partial availability from July 7, 2026 does not authorize uranium custody or create a mine rail spur.

Financial architecture

Preserve the $28 million July 18, 2025 Red Wash transaction and its escrow/holdback details. Use physical production, recovery, product pricing, capacity, staffing, asset, debt, tax and closure schedules from industrial v2. Evaluate the mine-upgrade investment separately from the logistics choice: the common $8 million mine spend was excluded from the existing differential logistics NPV.

Natural records and controls

Mine plan and production reconciliation; maintenance and qualified labor; sales and assay; approved custody interface; fixed assets and closure assumptions; acquisition/PPA support; legal/entity books; monthly forecasts and finite-funding schedules.

Priority failure modes: Unqualified logistics assumed available; treating conditional funding as cash committed; double counting common mine capital; omitting closure support; swapping a planning scenario for historical financial evidence.

The local control and interface register connects owner roles, evidence populations and existing CCF controls. Listed evidence requirements are not assertions that real controls operated.

Executable financial evidence

The business-driven successor now implements the current operating model and produces this unit's reconciled CSV, SQLite and audit workbook package. The financial design and export contract identify source events, preserved industrial references, scenario assumptions and remaining granularity. New Core economics begin in 2027; retained 2026 calibration remains explicit. Treasury schedules identify unfunded payment requests.

Operating histories and evidence

The operating successor adds dated service and maintenance detail, source/invoice/cost reconciliation and capacity checks while retaining the accepted industrial financial model. Infeasible allocations remain visible; the new records do not establish dispatch readiness, new permits or uranium custody authority.

Remaining boundaries

Separate mine economics and closure sensitivities can be implemented with transparent assumptions. Engineering qualification, exact new quotes and gated uranium custody remain decision/evidence requirements.

Numerical successor assumptions remain publicly synthetic and separately versioned. Released v0.1 and industrial v2 evidence retains its original source boundary.
