Cradle host rights and material title

SH-LEGAL-READ-HOST-001 · Reviewed September 12, 2026

LOCKED HOST BOUNDARIES; precise terms intentionally unassigned

Kelly Gang Mining

External Tasmanian operator retains host-plant command. Cradle owns/maintains recovery equipment, has exclusive recovery right to designated Stream 17 material during agreement term, and receives title at defined capture point.

Commercial allocation

Cradle bears direct recovery cost; Kelly Gang receives negotiated participation in realized recovered-product value. Canon intentionally does not fix percentage, exact price, tonnage or permanent margin.

Demotte

External West Virginia treatment operator retains treatment/discharge duties and immediate stop/bypass authority. Cradle recovery rights cover only captured intervention material; no host mine or remediation asset transfers.

Bedford and genealogy

Bedford is the Fairmont-area development/upgrading center, separate from the host treatment site. Trace stream, sample/assay, recovery, captured intermediate, Bedford batch, product acceptance, host settlement and financial record.

Plan distinction

Site/building layouts are modelled planning views. An external host context view is not a deed, plant ownership or authority to operate the host process.

Accounting and record trace

Use captured quantity and downstream acceptance before revenue/host settlement. Do not consolidate host payroll, plant or treatment liabilities; use selected model participation assumptions explicitly.

SH-CRD-CLOSEOUT-20260906 · project-cradle · Stream 17 · Kelly Gang Mining · Demotte Reclamation Services · Bedford

Missing evidence and limits

Full negotiated host term dates, final capture specification, signed instruments and independent title/settlement proof are not supplied by the closeout.
