# Atlas licensing and amendment evidence

SH-LEGAL-READ-ATL-001 · Reviewed September 12, 2026

LOCKED DIRECTION plus conditional commercial scenarios

---

## License perimeter

Core and Enterprise are client editions; Professional remains the SH-controlled professional plane. Managed adds agreed operated client-plane services. Licensing is institutional/tenant based, not primarily per seat.

## Price status

Illustrative market-testing annual bands are Core \$150K–\$350K and Enterprise \$350K–\$1.25M. Negotiation depends on scope, connectors, environments and support. These are not binding public offers or issued invoices.

## Separation

Material implementation is priced separately. Client-transferred agents cannot depend silently on unlicensed Professional resources. Tenant, data, access, connector and export boundaries remain documented.

## Amendment record

The operating successor supplies immutable contract versions with effective rate, seats, term, approval ID and applied month. Positive changes bill the remaining term; contraction/cancellation credits unearned claims rather than recognized service.

## Service-credit boundary

Monthly modeled service demand and breach consequences are not uptime evidence or a negotiated contractual SLA. Earned-service credits reduce revenue and cannot reduce ARR/deferred revenue twice.

## Accounting and record trace

Join `contract_id`, `scenario` and `month` across `contract_versions`, `commercial_changes`, `invoices`, `credit notes` and `commercial_deferred_rollforward`. Separate license revenue, implementation, cash and ARR.

SH-ATL-017 · atlas-meridian · `contract_versions` · `commercial_changes` · `commercial_deferred_rollforward`

## Missing evidence and limits

No full executed customer license, actual operational SLA result or signed amendment follows from synthetic approval IDs.
