

Willow — current business dossier

Document ID: SH-BIZ-WILLOW-001

Version: 1.2.0

As of: September 9, 2026

State: CURRENT SOURCE SYNTHESIS

Owner: Gid Voss experimental authority / Rachel Sloane institutional seam

Business and output

Willow maintains bounded experimental capacity at the Pittsburgh-area Fort. It is an internal program owned on the parent books, with a historical Klein lineage; it is not a subsidiary or a product P&L.

Experiments, prototypes, autopsies and qualified transfers. Internal benefit is assessed through learning and transfer decisions rather than invented sales or laboratory goodwill.

Operating lifecycle

Frame the question and budget → fund a bounded experiment → record results and unsuccessful attempts → continue, change, kill or transfer → require receiving operating owner, qualification and maintenance ownership before deployment.

Organization and authority

Gid retains experimental and epistemic authority in Pittsburgh. Rachel Sloane provides the Sacramento institutional seam. The 24-person working calibration is a model population, not a newly locked establishment. Reconcile borrowed specialists with their home populations.

Experimental approval is not permission to operate a mine, railway, treatment system or customer production system. Site scope preserves Big Shed, Small Shed, White Shed and Museum/yard distinctions.

Financial architecture

Populate WIL-100 through WIL-800 proposed cost centers using people, materials, external services and facilities. Expense research in the bounded model; separately track reusable capital equipment, depreciation, retirements and transfers. A transfer within SHI changes custody/cost center and creates no external profit.

Natural records and controls

Project authorization and budget; experiment and failure log; purchase and receipt; fixed-asset register; gate decision; transfer/qualification checklist; maintenance handover; historical Klein disposition.

Priority failure modes: Endless projects, unsupported capitalized research, duplicate borrowed-staff payroll, orphan prototypes, and a historical program mistakenly retained as a current entity.

The [local control and interface register](#) connects owner roles, evidence populations and existing CCF controls. Listed evidence requirements are not assertions that real controls operated.

Executable financial evidence

The [business-driven successor](#) now implements the current operating model and produces this unit's reconciled CSV, SQLite and audit workbook package. The [financial design](#) and [export contract](#) identify source events, preserved industrial references, scenario assumptions and remaining granularity. New Core economics begin in 2027; retained 2026 calibration remains explicit. Treasury schedules identify unfunded payment requests.

Operating histories and evidence

The [operating successor](#) adds bounded follow-on awards, failed and corrected experimental attempts, qualification evidence and material budgets, commitments and cost-to-complete forecasts. Transfers still require a receiver, qualification and maintenance owner; staff assignment changes reconcile without duplicating payroll.

Remaining boundaries

Exact Fort parcel/ownership instruments and historical occupancy remain Geo #106. Physical concept and asset classes can be modeled without asserting a parcel, acquisition price or public hospitality business.

Numerical successor assumptions remain publicly synthetic and separately versioned. Released v0.1 and industrial v2 evidence retains its original source boundary.
