

Geographic framework

Named constraints are recorded. Search-envelope vertices remain implementation proposals.

GOVERNED FRAMEWORK / SITE ENGINEERING IN PROGRESS

SACRAMENTO

HQ: Railyards / River District seam | EPSG:26910

KANAWHA VALLEY

Cradle: Belle recovery-development corridor | EPSG:26917

PITTSBURGH

Evalon / Willow lineage: GEO-C002 | EPSG:26917

WYOMING

Red Wash / Taylor / Wamsutter: approved addendum | EPSG:26913

Corporate geographic census

Operating geography, study areas and historical context are distinct records.

CITY / REGION SCALE / NOT AN OWNED-PROPERTY INVENTORY

REGISTERED, UNLOCATED

J2 Education campus • J2 accommodation • Alexandria hosting • ARU terminals and customers
Cradle host opportunities • historical offices • provisional Reno / Elko / Tucson offices

INTERNATIONAL HISTORY

2022: Sar-e-Sang / Badakhshan, Afghanistan
2024: South Australia; Mole Creek / Deloraine, Tasmania

Red Wash / Sweetwater County

Approved fictional mine anchor: 42.22 N / 108.18 W. Full site and access geometry are separate work.

CURRENT GOVERNING ADDENDUM / CARBON COUNTY PIN SUPERSEDED

CONTROLLING DECISION

The approved addendum locates this fictional underground uranium mine in the Great Divide Basin / Red Desert, Sweetwater County, north of Wamsutter.

ANCHOR PRECISION

The coordinate is a fictional mapping control. It is not a real mine identity, surveyed portal or property boundary.

TAYLOR AND BS&T

Taylor replaces the former town name and serves as the fictional railway operating hub. Approved service uses Taylor transload and truck last mile. No mine spur is included.

PRESERVED HISTORY

The original Carbon County artwork and earlier derivatives are retained as superseded evidence. They no longer control current geography.

Sacramento headquarters

Railyards / River District seam; fictional campus envelope still to be selected.

STUDY GEOGRAPHY / EXACT SITE AND PROPERTY INTEREST UNRESOLVED

LOCKED DIRECTION

Sacramento headquarters with an advanced research and industrial institutional character.

WORKING SCALE

8-15 acres. The hatched area is a district search window, not that campus footprint.

REAL CONSTRAINTS

Rail corridors, local streets, river setting and an active redevelopment district. Public data does not convey real parcel title.

SITE WORK REMAINING

Screen current parcels, occupied facilities, planned projects, levee/flood context and access before selecting a footprint.

- Analyst search envelope
- Disputed source geography
- Real railroad reference
- Highway / road reference
- Hydrography reference

Hazelwood / Willow lineage

A historical shop and a later laboratory must not be collapsed into one timeless campus.

STUDY GEOGRAPHY / EXACT SITE AND PROPERTY INTEREST UNRESOLVED

CURRENT CANON

Evalon leased a light-industrial shop outside Pittsburgh in 2021. Its operating concept ended and became Willow in 2022.

HANDOVER DIRECTION

Hazelwood / Hazelwood Green, within Pittsburgh; 10-20 acres as a working site scale.

MATERIAL QUESTION

Does Hazelwood locate the later Willow campus, or revise the earlier Evalon shop? The map retains the question as GEO-C002.

REAL-SITE BOUNDARY

Hazelwood Green and its tenants remain real reference entities. No development or tenant parcel is claimed.

- Analyst search envelope
- Disputed source geography
- Real railroad reference
- Highway / road reference
- Hydrography reference

Cradle / Kanawha Valley

Industrial recovery-development geography, separate from Emberline and the host operation.

STUDY GEOGRAPHY / EXACT SITE AND PROPERTY INTEREST UNRESOLVED

LOCKED DIRECTION

Belle / Kanawha industrial corridor near Charleston. Fictional brownfield redevelopment; 20-30 acre working scale.

BUSINESS BOUNDARY

Cradle develops recovery interventions and stream-specific rights. A host mine does not become Cradle property.

RESEARCH CONTEXT

DOE/NETL and WVU work supports the Appalachian acid-mine-drainage and coal-waste recovery analogy, not this fictional parcel.

SITE WORK REMAINING

Exclude occupied chemical complexes; verify floodplain, brownfield constraints, utilities and feedstock logistics. Barge access is unselected.

- Analyst search envelope
- Disputed source geography
- Real railroad reference
- Highway / road reference
- Hydrography reference

Wamsutter interchange study

Real railroad context for a future fictional connection; no turnout or service rights selected.

STUDY GEOGRAPHY / EXACT SITE AND PROPERTY INTEREST UNRESOLVED

REAL HOST CORRIDOR

FRA rail records around Wamsutter identify UP ownership. The reference geometry remains Union Pacific infrastructure.

FICTIONAL SCOPE

BS&T connection and interchange tracks require a separate alignment, space assessment and dated ownership/rights model.

HISTORICAL BOUNDARY

No direct Red Wash connection or suitable secure transload existed at discovery. Qualified external carriers handle all 2025 movements.

NEXT ENGINEERING GATE

Use the approved mine anchor and Taylor hub. Compare terrain, crossings and host-track layout; ARU acquisition closes 07 Jan 2026.

- Analyst search envelope
- Disputed source geography
- Real railroad reference
- Highway / road reference
- Hydrography reference

Open geographic questions

Source conflicts and unknown physical locations remain visible, without invented pins.

DECISION REVIEW / INITIAL PROGRAM INCOMPLETE

GEO-C003 / ENGINEERING GATES — WYOMING

RED WASH AND BS&T

The mine anchor and Taylor name are approved. ARU closes on 07 Jan 2026. Taylor hub and truck last mile are approved; no mine spur. Terrain-screened route proposals still require engineered track grades, structures, land rights and capacity checks.

GEO-C002 — PITTSBURGH

EVALON AND WILLOW

Clarify whether Hazelwood locates the later Willow campus or revises the historical outside-Pittsburgh shop. Do not infer a relocation or backdate a large campus.

UNLOCATED REGISTER

J2 campus / historical offices / ARU terminals / Cradle hosts / exact Blackridge site

Red Wash / surface site study

Functional planning zones around the approved fictional control anchor; no surveyed portal or property boundary.

PROPOSED SITE GEOMETRY / GOVERNING ANCHOR LOCKED

GEOGRAPHIC CORRECTION

Sweetwater County / Great Divide Basin / Red Desert; anchor 42.22 N, 108.18 W. The prior Carbon County image geography is superseded.

SURFACE ENVELOPE

A 1,000 by 800 m phase-one planning window, about 198 acres. It is not the old scenario's property or disturbance acreage and is not a lease boundary.

ZONE PURPOSE

Processing, administration/workshops, water management and portal siting zones organize further study. Their dimensions are analyst proposals, not recovered image coordinates.

ENGINEERING REMAINING

Geology at the new anchor, decline/portal position, process design, waste facilities, setbacks, access, truck access from Taylor, utilities and legal land interests remain open.

BS&T / pre-acquisition scenario

Wamsutter-Taylor rail proposal; Red Wash served through Taylor with truck last mile, no mine spur.

PROPOSED GEOMETRY / ARU CLOSE 07 JAN 2026 / LAND RIGHTS UNRESOLVED

WORKING BUSINESS SCALE

About 40 pre-acquisition route-miles and 9,000 annual revenue carloads. BS&T has four locomotives, three generally available, and about 58 staff in the approved working model.

SCENARIO RESULT

The preferred Taylor C corridor measures 38.81 miles. The full fictional network is a proposed reconstruction of the working scale, not recovered historical track.

MINE SEPARATION

No mine spur. Approved design uses Taylor transload and truck last mile: 225 recurring rail loads/year, 300 design allowance.

HISTORICAL GATE

As of 06 Jan 2026, before Sable Harbor acquired ARU on 07 Jan. The centerline remains a proposed reconstruction, not recovered historical track.

BS&T / preliminary alignment

Wamsutter-Taylor rail proposal; Red Wash served through Taylor with truck last mile, no mine spur.

PROPOSED GEOMETRY / ARU CLOSE 07 JAN 2026 / LAND RIGHTS UNRESOLVED

MEASURED NETWORK

Legacy-scale corridor: 38.81 miles.
Current model excludes the mine spur.
Taylor transload serves Red Wash by truck.

PRELIMINARY GEOMETRY

Minimum sampled plan radii: 914 m on the legacy proposal. No intersected NHD waterbody length on that line.

FORMATION PROFILE

A constrained preliminary vertical profile meets the 1.8% design-grade limit. Legacy centerline cut/fill reaches about 7.55 / 5.50 m. Ground slope is a different metric.

UNFINISHED ENGINEERING

Track transitions, road and drainage structures, host turnout, land tenure, cross-sections, earthwork quantities and costs remain unresolved. This is not a surveyed alignment.
