

Atlas Meridian — current business dossier

Document ID: SH-BIZ-ATLAS-MERIDIAN-001

Version: 1.1.0

As of: September 9, 2026

State: CURRENT SOURCE SYNTHESIS

Owner: Atlas Meridian product organization

Business and output

Atlas Meridian is Advisory's working system and a product/capability with both external and internal use. It includes a client portal for file transfer and Sable Harbor review, and supports the delivery of transferable client workflow capability.

Scoped evaluation and design-partner work, client workspaces and transferable agent/workflow configurations. Foundry Field remains the flagship product. The accepted 70/30 heuristic describes the boundary between the protected Sable Harbor professional plane and the client plane. It is not an external/internal usage ratio, ownership split, code percentage or revenue formula.

Operating lifecycle

Agree question, rights and acceptance measures → ingest into the authorized client boundary → evaluate versioned candidate workflows → human review → client acceptance or documented rejection → transfer and support or close the workspace.

Organization and authority

The current dedicated team is a product-development organization, not an Advisory staffing reserve. Product specialists may support incidents, controlled design partnership and generalized capability without taking professional matter ownership. Simone Vale's transition and the twelve-month bridge remain formation history rather than the current organization. Hound/Ranger's historical 25-gauntlet and approximately nine-capability results remain historical evaluation context.

Atlas outputs are working material until an authorized human accepts the relevant decision or record. Atlas client access never conveys Alexandria Collection entitlement. Atlas is distinct from J2 and Daedalus.

Financial architecture

Track independently contracted product licenses, controlled design-partner evaluation, compute, validation labor, client storage and support. Licensing continues independently after Advisory transfer and exit. Internal work earns no external revenue. Separate build expense and customer delivery cost; do not derive the entire business from a fixed percentage of Foundry revenue.

Natural records and controls

Workspace scope and rights record; data receipt and provenance; model/workflow version; evaluation plan and result; human review; acceptance; transfer inventory; invoices and aged receivables; internal-use cost tags.

Priority failure modes: Client-to-client disclosure, evaluation success marketed as operational authority, hidden inference from restricted sources, retained data without a resolved lifecycle, and double billing bundled Advisory work.

The [local control and interface register](#) connects owner roles, evidence populations and existing CCF controls. Listed evidence requirements are not assertions that real controls operated.

Executable financial evidence

The [business-driven successor](#) now implements the current operating model and produces this unit's reconciled CSV, SQLite and audit workbook package. The [financial design](#) and [export contract](#) identify source events, preserved industrial references, scenario assumptions and remaining granularity. New Core economics begin in 2027; retained 2026 calibration remains explicit. Treasury schedules identify unfunded payment requests.

Remaining boundaries

Runtime/vendor selection, permanent commercial launch criteria, exact partner identities and final retained-data rules remain separately scoped. The implementation can validate interface contracts without claiming a deployed secure portal.

Numerical successor assumptions remain publicly synthetic and separately versioned. Released v0.1 and industrial v2 evidence retains its original source boundary.
