

ARU — dated security administration completion

Document ID: SH-ARU-ADMIN-COMPLETION-20260922

Version: 1.0.0

State: OWNER_APPROVED_DIRECTION_PENDING_REPOSITORY_ACCEPTANCE

Owner: ARU Treasury / Corporate Legal

Prepared: September 22, 2026 UTC

Authority and precise successor

The owner instructed “OK. Finish everything.” after accepting the half-original-unit capital schedule, ARU-owned collateral variant, and host option B. This record completes ordinary fictional administration of the already approved ARU instrument. It does not change principal, rate, maturity, repayment, collateral membership, guarantors, ownership, or the September 22 grant date. Exact utterance time was not supplied.

The structured source is `enterprise/closeout/source/debt_administration_2026_09_22.json`; `enterprise.closeout.debt_administration.build` validates and emits the population. Edition 1.1.0 and its source bytes remain unchanged. On repository acceptance this successor controls only the later administrative states stated here. Newly authored event minutes are synthetic chronology, not recovered timestamps or real government acts. Actual source availability is no earlier than the clean committing revision and authored timestamp.

Complete identified population

The schedule identifies all 64 goods/fixtures already granted: 14 handling machines, 44 road tractors/trailers, and six track components. Each has a distinct explicitly synthetic serial reference. Road goods have distinct synthetic Wyoming title references; these are not real VINs or certificates. ARU's Taylor office and the two Taylor fixture sites are in source-recorded Sweetwater County. Rawlins equipment remains identifiable at its original facility; debtor residence/title jurisdiction is separate from parking location.

Two fixture-site records identify the existing terminal and warehouse, source acreage and coordinates, a newly authored case recording reference, and the complete closed polygon attachment copied exactly from the accepted `geospatial/geojson/industrial_facilities.geojson` feature. The named SYN-SW boundary schedules are present in the structured source; no absent attachment is implied. They identify where the six goods are installed. They do not create a land acquisition, surveyed boundary, fee-simple opinion or land/building mortgage. The description supports the explicitly modeled case record; it is not a filing-ready cadastral instrument for a real parcel.

The original officer ownership confirmation remains controlling. No future replacement asset, leased item, railway-owned asset, customer asset or after-acquired-property sweep enters the schedule.

Execution, filing and priority are separate

A newly authored administrative record gives the existing September 22 grant a fictional 17:30 UTC execution time, followed by scoped submissions at 18:00 and acknowledgements at 18:15. Three case filing records cover the Wyoming Secretary of State goods population, Sweetwater title notation, and Sweetwater fixture record. Title notation is explicitly recorded for each of 44 titles; filing a general UCC alone would not suffice for those goods. The acknowledged case record does not imply any actual submission or government communication.

The legal-method basis is Wyoming's [official UCC](#), read September 22: attachment under 9-203; debtor/title jurisdiction and specialized perfection under 9-301, 9-303 and 9-311; filing office and fixture identification under 9-

501/502; authorization under 9-509; termination under 9-513. The source records the retrieved PDF hash. These provisions support the modeled method, not a professional enforceability opinion.

For the ordinary goods, the modeled attachment and filing chain supports the limited modeled-perfection state. For titled goods, that state depends on the explicit title notation. Fixture perfection and competing real-property priority remain distinct: section 9-334 can subordinate fixtures to prior land interests. No purchase-money exception or first-priority position is invented. Section 9-322 ordering alone does not clear statutory liens or bankruptcy risks. The dated search describes its exact modeled population; it does not assert the absence of all possible claims. Under 9-515, the ordinary Wyoming financing statements modeled here have a ten-year duration; title notation does not inherit that timer.

The [Wyoming SOS FAQ](#) distinguishes acceptance time, searches and paper attachments. [County title guidance](#) corroborates Wyoming title notation, while venue here comes from ARU's accepted Sweetwater facts. [Section 18-3-402](#) requires advance county fees. The case cost record therefore covers fees rather than treating filings as free. Its separately identified synthetic provider advance records fee tender and acceptance at 17:55 UTC, before submission. It is an ordinary provider disbursement within the existing \$250 all-in component, not additional company cash or independent bank confirmation.

Existing payoff and current release evidence

Two newly authored creditor acknowledgements reconcile the existing January 7 principal settlement: \$11.5 million old term and \$2 million revolver. They are current September 22 acknowledgements, not newly discovered independent January bank records. Each identifies the existing payoff component, authorized creditor capacity, limited release, delivery and matching case-record termination. The release is current and covers only security interests arising under that named old facility in the 64 identified ARU assets. It does not assert that every item was previously encumbered. It leaves unrelated rights and \$2.5 million retained leases outside scope. No second payoff, waived company-wide claim, new creditor economics, historical interest recalculation or new cash results.

Cost and accounting boundary

The \$250 all-in administrative service cost is a newly authored component within the accepted \$200,000 ARU corporate operating-expense envelope. It covers preparation, filing/search charges and release recording; it is not represented as a statutory fee tariff or a separately retained independent service-provider invoice. The September monthly cash model remains aggregate evidence; no separate bank settlement is asserted. This component attribution adds zero journals, cash, expense or debt. It does not consume or rewrite August's completed-period evidence. Any later actual payment or incremental cost beyond that envelope requires its own accounting event.

Reperformance and limits

The provider rejects omitted/duplicate collateral, wrong owner/location, wrong filing route, authorization after submission, acknowledgement before submission, changed payoff principal and double-posted leases/cash. As-of state transitions are separate from actual available-at. Source pins include the original instrument, operations, finance and debt-host records. Remaining real external action, actual parcel/title searches and unlimited priority opinions are outside the synthetic-company assignment; current fictional administrative evidence is complete at the bounded scope above.
