

ALEXANDRIA VISUALIZATION AND BRANCHING HISTORY

Document ID: SH-J2-ALX-VIS-001 | **Version:** 1.0.0 | **Effective:** September 2, 2026 | **State:** LOCKED
DIRECTION

Owner: Orientation / Alexandria stewardship | **Related:** connection, provenance, temporal integrity, Daedalus |
Cross-reference: INSTITUTIONAL_MEMORY_AND_CONNECTION.md; PROVENANCE_AND_LINEAGE.md;
DAEDALUS_PERSONAL_INSTANCE_AND_WORKSPACE.md

Visualization helps a person reason about institutional time and connection; it is not decorative dashboarding. Alexandria and Daedalus may present timelines, branching histories, connection maps, evidence lineage, assumption dependence, cross-business comparison, and Git-like branches of institutional understanding.

A timeline distinguishes event, record, access, understanding, and institutional-change times where material. A branch view shows competing interpretations, the evidence each relied upon, dissent, merge or supersession, and what remained unresolved. A lineage view moves from institutional statement toward sources and from an assumption toward later decisions and outcomes.

Visual prominence does not create authority. Node size, color, proximity, centrality, or machine-suggested connection must not imply truth, consensus, causation, importance, or access that the underlying record does not support. Every visual element remains traceable to its source/state, and restricted relationships cannot be exposed through shape or absence.

Daedalus can assemble persistent user-side investigative visuals. They are marked synthetic and non-authoritative, remain outside Alexandria, and cannot promote themselves into Canon, Semaphore, Judgment, or EIB. A human may independently author an institutional visual under the applicable process.

Spatial or augmented-reality interaction is a future capability direction, not a v0.1 dependency. The constitutional requirement is faithful, navigable representation of time, provenance, disagreement, and connection regardless of interface technology.
