

SABLE HARBOR — PHASE 2 COVERAGE AUDIT

Audit ID: SH-INT-AUDIT-P2-001 | **Version:** 1.0.0 | **Audit date:** September 3, 2026

Baseline: September 2 design-session handover | **Disposition:** EXPANSION COMPLETE

Structured record: coverage_audit_phase2.json

Method and conclusion

The audit treated the design-session decisions as expected truth and compared their individual doctrines, exceptions, rights, negative boundaries, temporal behavior, and unresolved states to the branch at commit 626db32. File presence alone did not count as coverage. A short paragraph covering a deeply designed institution was classified **COMPRESSED** even if factually correct.

The first-phase package preserved the architecture accurately but compressed important governance procedures, Contact collection management, both officer professions, Headquarters, and Alexandria's temporal/provenance/disclosure/authorship doctrines. Phase 2 expanded each into first-class corporate artifacts. No omitted locked decision was converted into an invented implementation fact.

Open decisions protected

The audit did not invent Internal Audit maturity; exact J2 headcount; named J2 leaders; final Orientation ranks; former-Head director exception; Alexandria stack; raw Collection role model; final Semaphore precedence terms;

retention/deletion law; or spatial/AR implementation. Their absence is faithful OPEN-state preservation, not compression.
