

J2 OPERATING MODEL

Document ID: SH-J2-OPS-001 | **Version:** 1.0.0 | **State:** LOCKED DIRECTION

High-level organization

Functional loop

Solid arrows are work-product flows, not reporting lines. Dotted edges are doctrine, collection, reach-back, cross-cutting-arm, or learning relationships. HQ is not a giant command tower.

Contact collection is directed broadly by Orientation's enterprise priorities and specifically by Judgment Officers' collection requirements/RFIs. HQ arbitrates conflicts/scarcity. Contact chooses lawful source, method, timing, and provenance. Judgment Watch belongs to Judgment but works at Contact intake; it triages and correlates signals, routes them to live problems, or proposes a new problem. Once assigned, the Judgment Officer owns the problem.

J2 outputs connect to governance: material findings may trigger rapid adjudication; board and executive Orientation officers protect epistemic integrity; JAG may surge as a fact witness/ground-truth collector; Education converts important learning into instruction. None of these relationships creates line command.
