

PINAKES PORTAL AND HUMAN UX

Document ID: SH-J2-PINAKES-001 | **Version:** 1.0.0 | **State:** LOCKED DIRECTION

Pinakes—named for Callimachus's catalog of Alexandria—is the **human-facing catalog and portal**, not primarily an invisible ontology. The earlier Pharos main-portal concept is SUPERSEDED.

The nine doors are: **EIB Archive** (every issued brief across time); **Finance** (authorized finance/analysis); **Judgment** (live/closed problems and judgments); **JAG Knowledge** (deployments, interventions, follow-up and reusable lessons); **Semaphore** (traffic corpus); **Canon** (current and historical institutional understanding); **Business Lines** (Foundry/Field, Willow, Atlas Meridian, Pale Sun/Red Wash, Cradle, ARU/BS&T, Advisory, Emberline history, and canon-supported lines without implying entities); **Collection** (authorized underlying Contact material); and **Education** (mandatory/deep learning, literacy, cases, pathways).

Employee journey

An employee opens current or historical EIB, follows an item into its portal, and—where authorized—can source it, trace backward/forward, see correction/supersession, related judgments/decisions, timelines, branches, and point-in-time comparisons. Search spans full text, topics, time, business line, status, decisions, problems, and references. Rabbit holes are a feature.

Daedalus accompanies the user across doors and maintains a user-side working set. It can hold, pull, trace, reconstruct, challenge, compare, explore, and visualize without touching authoritative sources. Restricted detail is never disclosed through synthesis or inference.

The machine registry is `../structured/pinakes_portals.json`; it supports this human experience and is not a premature ontology.
