

Company closeout owner directions

Document ID: SH-CODEX-COMPANY-DIRECTIONS-2026-09-15

Version: 1.2.0

Record date: September 15, 2026 UTC

Voice record date: September 14, 2026 America/Los_Angeles; exact utterance times unavailable

Acceptance: Pending repository integration; conversation-authorized implementation

State on acceptance: LOCKED DIRECTION within the scope below

Owner: Alex Kaper

Provenance and authority

The owner supplied SH-CODEX-COMPANY-CLOSEOUT-2026-09-15 v1.0 directly to this execution session. That handover transcribes the three returned voice decisions below. This record preserves their substantive authority without asserting possession of the separately named September 14 review or original voice upload. Their hashes in the handover are reported provenance, not independently reverified attachments. No exact utterance timestamp, tax effective date, fictional signature, board ratification or real submission is inferred from this record date.

The accepted [September 13 billing adoption](#) already authorizes reasonable missing fictional accounting/legal details consistent with canon and records PR #145 design approval conditional on substantive reconciliation. This direction does not create a new broad approval prerequisite for that work.

SH-VOICE-TAX-01 — Parent corporate tax direction

! “Yeah, C Corp, but it's in Delaware, right?”

Implement C-corporation taxation of **Sable Harbor, LLC**, the existing Delaware LLC. Preserve its legal name, 2016 year-precision formation, Sacramento headquarters and source-recorded synthetic California foreign qualification. No legal conversion, new subsidiary, headquarters move, tax consolidation election or effective date was selected. Establish history from source evidence and period-specific primary authority; label newly authored fictional history and preparation/submission/acknowledgement states. No real IRS filing is authorized. The ownership perimeter remains SHI → SHIH → PS → RWH and SHIH → ARU → BST. Preserve subsidiary classifications, ARU acquisition history and its intended section 338(h)(10) election state. Financial consolidation is not a tax group. No rate, benefit, expense, liability or saving was approved by voice.

Supersession: resolves the parent C-corporation preference within issue #18 and prior open preference questions only. Effective history and its material consequences require evidenced implementation; it does not supersede legal identity or subsidiary canon.

SH-VOICE-TAX-01 implementation return — corporate from formation

On September 14, 2026 America/Los_Angeles (September 15 UTC), the owner answered “Adopt corporate-from-formation history” after receiving the two prepared alternatives and their material effect on prior member-tax periods. This authorizes the newly authored 2016 corporate-from-formation history and reconstruction of its prior tax records. The October 1, 2026 prospective alternative remains a preserved, unselected workpaper. The original LLC legal identity and year-precision recovered formation fact remain intact. The detailed fictional dates, submission/acknowledgement states, bases and workpapers must be labeled authored and reconciled; no real filing or recovered certificate is implied. This supplemental return resolves the effective-history choice within SH-VOICE-TAX-01. Repository acceptance and financial reconciliation remain separately evidenced.

SH-VOICE-GW-01 — Unsupported Core goodwill removal

“So we'll eliminate it.”

Remove the full **\$30,000,000** unsupported nonindustrial legacy Core goodwill from a supported, separately versioned current successor. Establish source provenance and the correct correction method; neither a historical balancing-number description nor an impairment/prior-period label is an established accounting conclusion. Do not invent an acquisition or replacement asset. Direct cash flow and new contribution from this removal are zero; absent separately supported liability/tax effects, assets and equity fall by \$30,000,000. No automatic tax deduction or deferred-tax asset follows. Protect ARU's separate \$14,762,500 book and \$13,000,000 tax goodwill, subject to reperformance. Preserve immutable released bytes and explain exact period/scope supersession. Correct source/legal books and consolidation once, including existing goodwill-excluded views.

Supersession: selects removal over seeking new acquisition support for this Core calibration. It does not alter ARU acquired goodwill, authorize cash funding, rewrite historical releases or preselect the accounting classification.

SH-VOICE-CAP-01 — Tight ownership and continuing sovereignty objective

“Yeah, I want to keep ownership tight, and is there a way we can build where eventually Sable Harbor becomes sovereign?”

“I wanted to explicit that, like, and when we keep continuing to model, that we continue to trend towards sovereignty.”

Maintain ownership/control continuity and model decreasing dependence on recurring member cash. Preserve accepted 2021/2022 financing history, no founder secondary, working approximately 66.5% insider / 33.5% outside ownership and the nine-member unitary board with CEO/Chair separation and investor/independent roles. Rounded history is not an exact cap table. Existing-holder proportional funding is the working implementation direction, not an executed agreement or compulsory call. No new outsider, dilution, preference, buyback, forced exit, convertible, unlimited debt or guarantee is approved.

Inherited conditional member capacity is \$90,000,000 for 2026; annual 2027–2031 base, downside and expansion capacities are \$30,000,000/\$25,000,000/\$40,000,000 respectively, with subsidiary reservations \$18,000,000/\$16,000,000/\$25,000,000. These are neither cash nor binding commitments. Keep capacity, request approval, due date, receipt and issuance separate. Unfunded amounts remain visible without automatic rights changes.

Each successor must reconcile annual/cumulative member cash, operating generation, internal cash after applicable taxes/sustaining investment/commitments, internal/external growth financing, entity liquidity/debt service and ownership/control continuity. Define units, formulas and populations; avoid double subtraction and use N/A for meaningless ratios. Explain economic causes of progress and setbacks. The inherited \$2 million floor remains scoped model policy. No attainment year, guaranteed or monotonic trend is approved.

Supersession: replaces the open capital preference with this continuing objective. Existing investor rights, accepted financing history, supported debt and governance survive. No invented precise holder rights or compulsory funding can fill a material source gap.

SH-VOICE-CAP-01 implementation return — exact fictional holder register

On September 14, 2026 America/Los_Angeles (September 15 UTC), the owner answered “Adopt the proposed fictional register” while quoting the prepared five-holder proposal and its explicit sole-registered-subscriber assumption. Exact utterance time was not supplied. This is approval to author the following precise fictional history, not evidence recovered from rounded financing descriptions:

Registered holder	Equal participating units	Economic/ordinary unit-vote share
Daniel Mercer	33,250,000	33.25%

Registered holder	Equal participating units	Economic/ordinary unit-vote share
Priya Raman	19,950,000	19.95%
Jon Bell	13,300,000	13.30%
Harrison Vale Partners	18,500,000	18.50%
Wolf Ridge Holdings	15,000,000	15.00%
Total	100,000,000	100.00%

The owner-approved implementation choice makes Harrison Vale the sole registered subscriber to the authored \$48,000,000 June 18, 2021 round and Wolf Ridge the sole registered subscriber to the authored \$135,000,000 October 28, 2022 round. It does not claim that “led” established sole subscription. The 2021 consideration is the exact \$96/37 per unit; the 2022 consideration is \$9 per unit. No founder secondary, new preference, conversion, anti-dilution right or option pool is created. The nine-member unitary board, CEO/Chair separation and accepted investor/independent roles remain intact. Substantive designation thresholds are not supplied by this approval. Founder consideration and monetary capital accounts require separate source-backed reconstruction; units are not an accounting plug for goodwill.

Voluntary proportional paid-in contributions may increase monetary capital accounts without issuing new units, after the ordinary governing-record reconciliation. Requests use the established equal-unit participation shares; round down initial amounts to cents, then assign remaining cents by largest fractional remainder, with stable holder-ID tie breaking. No request is a binding commitment or compulsory call. Preserve approval, capacity, due date, receipt and settlement separately; nonparticipation creates a shortfall without automatic dilution, forfeiture or reassignment of another holder's cash.

Supersession: resolves the exact register and voluntary contribution mechanism in [the prepared proposal](#). Its OPEN owner-choice label no longer controls this scope. This return does not adopt unlisted side letters, hidden beneficial owners, new control rights or actual execution. Financial reconciliation, repository acceptance and delivery remain separate. The continuing sovereignty objective and adverse-case guardrails above remain required in future revisions.

Delivery boundary

The [company closeout register](#) tracks implementation, validation and residual claims for SH-C01–SH-C10. A decision recorded here does not establish a completed company edition, executed election, posted journal, funding receipt, portal integration, accepted PR or completed release. Repository acceptance changes the direction's status only within its express scope; evidence must substantiate each implemented consequence.
