

Transaction cash and conditional tax support

DRAFT — exact-file review pending. Base scenario, 2026-01 through 2026-12. Synthetic reconstruction, not independent audit evidence.

This separate base-2026 bridge is not added to base-2027 activity. ARU filing-ready is not IRS filing or acceptance. Tax/book PPA assumptions remain conditional current industrial source records, not an election, return or valuation opinion. Red Wash escrow/holdback are included in purchase consideration rather than extra price.

What is included

Complete declared source populations are in working-papers.xlsx and the source CSV/SQLite tables. The workbook Guide maps every table to its complete sheet and source file. Values beyond Excel's 15-digit numerical precision remain text. Printed previews show leading rows and columns only; they do not limit the Excel population.

The workbook contains 7 complete source tables (143 rows), plus its Guide and Checks sheets. Repeated tables across packages are convenience mirrors, not additional transactions.

Financial measures

Measure	USD
ARU stock consideration	48,000,000.00
Residual book goodwill	14,762,500.00
Independent tax goodwill basis	13,000,000.00

These measures use the stated Core, Treasury, consolidated or industrial view; they are not interchangeable populations. Source columns remain in the complete workbook.

Reconciliation and review

1 independently computed checks passed: population/source identity, decimal rollforwards and the applicable ledger or document joins. RECONCILIATION.json preserves each result; the workbook Checks sheet makes the tolerance test visible. No balancing adjustment was added.

Provenance

Release business-operations-v1.0.0, source 57cfa1b1c483ccf1f8b15d82c4cbdadbeef8063e. The evidence register pins archive, native database, each CSV and extracted database hashes. Other scenarios and later years remain in the native release and are not claimed human-complete by this package.

The additional acquisition PPA, opening accounts, tax, debt and asset sheets reproduce current industrial sources separately. CURRENT_SOURCE_BRIDGE.json records their distinct current-source hashes. Filing-ready remains distinct from filed or accepted.
