Colocation orders and SLA review

SH-LEGAL-READ-COLO-001 · Reviewed September 12, 2026

CUSTOMER-PROPOSED DRAFT; unsigned

Selected providers

Switch TAHOE RENO is the primary transition selection; IDACORE Boise is independent recovery. Both selections are accepted direction; neither is executed procurement, reserved capacity or installed service.

Reno order

RT-SO-RENO requests 75/100 kW alternatives with expansion toward 200–250 kW. The \$350/kW/month finance input is analyst assumption, not a Switch quote. Building/enclosure/legal provider party/commencement are unverified.

Boise order

RT-SO-BOISE uses a 25 kW recovery envelope with 50/100 kW expansion cases. Published \$300/kW/month actual-draw pricing is a procurement baseline; meter intervals, minimums, charges and term ambiguity require order resolution.

Proposed remedies

Power availability is measured per affected delivery point, separate from application uptime. Proposed credits are 5/10/25/50% by outage band, capped at 50% of affected recurring facility charges; not accepted provider obligations.

Access and exit

Proposed authenticated remote-hands work orders exclude data/key access. Customer retains equipment/data/keys. Proposed 90-day transition and no obstructive liens require negotiated legal acceptance.

Accounting and record trace

No vendor payable at provider selection. Keep colo service cost, deposits/prepayments, IT hardware and owned-site capital separate; do not duplicate power charges in a power-inclusive rate.

SH-RT-CONTRACT-001 · RT-MSA-001 · RT-SO-RENO · RT-SO-BOISE · RUNTIME-RENO-COLO · RUNTIME-BOISE-DR

Missing evidence and limits

Legal provider entities, quotes, executed orders, insurance, access/audit rights, technical acceptance and control-period reports are still needed.
