Taylor–Red Wash service terms

SH-LEGAL-READ-IC-001 · Reviewed September 12, 2026

SYNTHETIC_RECONSTRUCTED; uranium custody OPEN_GATED

Parties and duration

ARU supplies terminal/trucking services; BS&T separately supplies rail; RWH is customer. Five-year term: July 7, 2026–July 6, 2031. Each service names its actual seller even when ARU administers billing.

Price and quantity

Combined rates per car: acid \$3,010; binder \$2,390; lime \$2,500; steel \$2,725; process/MRO \$1,900; qualified project freight \$4,600. The 225-slot allowance contains 215 billable cars and ten unbilled contingencies; no minimum-volume or exclusive-carrier covenant.

Service and exceptions

72 elapsed hours interchange-to-empty-release, 96 for steel; 36–48-hour operating goal. Customer-caused storage may incur \$50/car/24 hours, prorated; provider delay earns no such charge. Baseline has zero chargeable dwell.

Billing and exit

Monthly actual quantities and accepted rate versions; payment due within 30 calendar days. Thirty-day curable-breach period. Convenience termination after first year requires 180 days notice and carries no volume penalty.

Asset and custody boundary

RWH owns the \$3.25M mine program; ARU the \$5.25M Taylor program. The \$8.5M phase is separate from tariff revenue. Finished uranium concentrate and a mine rail spur are excluded.

Accounting and record trace

Reconcile reciprocal invoice IDs once across rail, terminal and trucking sellers and the RWH buyer. Eliminate internal balances/income once; preserve external costs and owner depreciation.

SH-IND-IC-001 · ARU · BST · RWH · intercompany_invoices_2026 · intercompany_eliminations

Missing evidence and limits

No authentic executed tariff, insurer certificate or uranium qualification is supplied. Third-party linehaul/demurrage needs its own invoice and governing terms.
