Directors consenting

The undersigned directors of Sable Harbor, acting by unanimous written consent in lieu of a special meeting, approve the resolutions below.

- Margaret "Maggie" Kincaid, Independent Chair
- Daniel, Founder / CEO / Director
- Priya Raman, Founder / Director
- Jon Bell, Founder / Non-management Director
- Thomas "Tom" Calder, Independent Director
- Evan Mercer, Harrison Vale Partners Director
- Marianne Voss, Wolf Ridge Holdings Director
- Dr. Lilia Maratovna Galiullina, Independent Director
- Hendrik "Harry" van der Velde, Independent Director

Recitals

The Board has previously approved the company's financing, board-composition, CEO/Chair separation, and five-committee governance architecture through the records dated June 18, 2021; October 28, 2022; and February 15, 2024.

Management and J2 design leads have now presented a consolidated governance, J2, Alexandria, and controlled-document package intended to codify the company's native authority, intelligence, learning, and institutional-memory architecture. The package is intended to describe Sable Harbor as a functioning enterprise first; external assurance and the Common Controls Framework consume this world and do not design it.

Materials reviewed

The directors reviewed the governance constitution; board/capital governance; board-evolution record; committee charters; reserved-matters/subsidiary-autonomy doctrine; control-dissent and rapid-adjudication doctrine; Assumption of Risk doctrine and form; abstention/information-deficiency doctrine; decision-quality/AAR doctrine; conflict-integrity/founder-authority doctrine; J2 charter and operating model; Contact, Judgment, Orientation, JAG, Education, and EIB doctrine; Alexandria charter; Pinakes, Semaphore, Canon, Daedalus, temporal-integrity, provenance, information-access, AI-authority, human-authorship, and personal-workspace doctrine; J2 identity and letterhead package; controlled-document index; structured registers; and validation results.

The approved artifact lists are attached as [Exhibit A — Governance](#), [Exhibit B — J2](#), [Exhibit C — Alexandria](#), and [Exhibit D — Controlled Publications and Catalogs](#). The exhibits are indexes only and do not alter the resolutions or settle open matters.

Resolutions

The Board ratifies the **Governance Constitution** as Sable Harbor's controlling governance doctrine, including authority following exposure and accountability; freedom inside the envelope; consequence rather than uncertainty as the escalation trigger; the duty of challenge and humility; and conflict integrity.

The Board approves the reserved-matters, subsidiary-autonomy, rapid-adjudication, Assumption of Risk, abstention, decision-quality, AAR, conflict-integrity, and founder-authority doctrines as controlled governance records.

The Board ratifies **J2 — Judgment & Junction** as an internal Sable Harbor institutional capability, not a legal entity or customer-facing business line, consisting of a small Headquarters, Contact, Judgment, Orientation, Junction Advisory Group, and Education.

The Board ratifies the J2 identity package and letterhead system as controlled internal identity collateral subordinate to the Sable Harbor corporate document standard.

The Board approves **Alexandria** as the umbrella institutional intelligence environment and ratifies the naming and purpose of **Pinakes** as the human catalog/portal, **Semaphore** as the cable-like traffic system, **Canon** as the institutional knowledge corpus, and **Daedalus** as the personal non-authoritative AI research companion.

The Board approves the Daedalus AI-authority boundary: intellectual aggression without institutional authority; no authoritative record write; no self-promotion into Canon/Judgment/Semaphore/EIB; no institutional authority except by quoting human-authored records; personal instance isolation; content-free skill sharing; and universal read with bounded disclosure as an architectural direction subject to future runtime controls.

The Board approves the corporate document system requiring canonical Markdown, controlled corporate publication where appropriate, and structured representation where appropriate, with source/publication/catalog reconciliation.

The Board directs Corporate Governance, J2 Headquarters, Orientation, and the relevant owning functions to maintain the controlled-document index, structured registers, validation routines, and supersession boundaries so that polished publications do not create canon beyond the source records they publish.

Open matters preserved

The Board does not resolve the following through this consent: Internal Audit operating model; exact legal suffixes, jurisdictions, tax elections, special-purpose vehicles, or intercompany mechanics; total J2 staffing; named J2 leaders; exact Orientation rank nomenclature; whether a former Head/Director of Orientation may later become a non-executive director; Alexandria runtime technology stack; raw Collection entitlement implementation; Semaphore precedence vocabulary; retention/deletion implementation; or spatial/AR implementation.

Publication and audit note

This consent provides the in-universe board approval basis for the September 2026 controlled governance/J2/Alexandria package. The consent does not convert repository generation, validation, or PDF publication into independent proof of substantive approval. Source doctrine and board records control; generated artifacts reconcile to them.
