management histories/titles

Pale Sun and Red Wash

Evan Vilander is President of Pale Sun. Mari Varela is COO of Pale Sun and CEO of Red Wash Mining, LLC. Evan owns platform strategy, capital cases, federal/downstream relationships and company-building. Mari owns mining/technical operations, mine protection and the right to reject unqualified operating changes. Martin Shaw is the Red Wash transaction lead; Henry Norwood is the NMI seller principal. Cole remains site superintendent with temporary stop authority; his surname remains unestablished. Walt Sutter is an external retired geological source, not an employee.

The 12-person platform is the existing platform envelope reclassified to legal employer PS; 128 employees remain at RWH. Mari is counted once in the platform and carries a dual officer title. Cole occupies the single site general-management billet. These changes do not add people to the total 140. Platform billets: President; COO/mining executive; commercial director; contract administrator; federal/downstream partnerships manager; controller; accounting/treasury analyst; development engineer; resource/technical assurance specialist; supply-chain coordinator; people/records officer; executive operations coordinator.

Retained ARU leaders

All fourteen biographies below are authored synthetic detail. The names were checked against existing public people records before creation. Compensation and employee IDs are controlled by [finance source](#); these people occupy existing billets inside 131 FTE, not an additional leadership overlay. Fred's consultancy is external service, not a 132nd employee.

Person and role	Derived career and retained competence	Authority and succession
Nora Ashcombe — President/COO, ARU	Age 52; joined in 1998 as terminal commercial coordinator, became multi-site operations manager in 2012 and deputy operating lead in 2020. Learned customer promises by owning missed handoffs, not by acquiring a central staff	Day-one operating successor to Fred; accountable to SHIH. Gareth provides ordinary operations cover; capital remains subject to delegated authority
Gareth Pike — Director, Industrial Operations	Age 50; joined in 2001 through warehouse/materials-handling operations, led multi-customer scheduling before group coordination	Coordinates nonrail resources without overriding Seth's railway operating authority; develops terminal-manager relief
Tessa Rourke — Controller	Age 45; joined in 2011 after regional industrial accounting work; rebuilt contract-to-invoice reconciliation and equipment-debt records	Owns close, credit/working-capital visibility and separate books; accountant/treasury relief documented;

Person and role	Derived career and retained competence	Authority and succession
		no dispatch authority
Owen Halberg — Director, Safety and Environment	Age 49; joined in 2009 after industrial environmental field work; knows stormwater, spill response and local corrective-action history	May require holds under defined safety procedures; advises Nora on cross-business exposures; cannot waive a railway rule or state permit
Leah Denning — People and Administration Manager	Age 44; joined in 2014 through payroll and scheduling administration; understands seniority and local grievance handling	Maintains employment/retention records and qualification renewal reminders; respects craft representation and line safety decisions
Miles Harker — Procurement and Systems Manager	Age 41; joined in 2016 through purchasing and inventory control; connects maintenance demand, parts and dispatch records	Owns procurement workflow and records, not operating safety/rail competence; supports shared-system continuity without forced replacement
Seth Kettering — BS&T General Manager	Age 56; joined railway service in 1992, progressed through train/engine and operations, GM since 2013. Retains practical customer/interchange knowledge	Railway operating authority; Anika develops operating relief. Sold his entire 10% ARU interest but retains no shareholder veto
Anika Soren — BS&T Operations/Dispatch Manager	Age 43; joined in 2008 through customer-service/dispatch coordination; learned conflicting industrial windows and crew constraints	Controls daily plan within railway rules; qualification boundaries distinguish administrative dispatch coordination from any required operating credential
Calvin Mott — Working MOW Foreman	Age 51; joined in 1999 on track maintenance and became working foreman in 2012	Occupies a represented BMWED MOW billet; coordinates work/inspection escalation without becoming a new unrepresented executive
Paulina Dace — Mechanical Foreman	Age 46; joined in 2007 after diesel industrial-equipment maintenance; leads locomotive availability and overhaul planning	Nonunion mechanical billet; release-to-service follows qualified inspection, not pressure to meet an EBITDA target
Silas Wren — BS&T Safety/Compliance Manager	Age 47; joined in 2010 with rail operations/safety experience; organizes training and event follow-through	Maintains railway compliance/corrective-action records; connects Owen's corporate program to property-specific duties
Derek Fenwick — Terminal Manager	Age 48; joined in 2004 as equipment operator, supervisor in 2011, terminal manager in 2018	Assigns terminal labor/equipment and protects transfer work; no authority to open the uranium gate by accepting an appointment
Marta Ellery — Trucking Manager	Age 46; joined in 2006 as driver/planner, dispatch lead in 2013 and trucking manager in 2019	Maintains driver/equipment/route qualification and last-mile schedule; external carriers remain valid capacity options
Inez Calderon — Warehouse Manager	Age 42; joined in 2010 through inventory/customer accounts, manager since 2020	Owns stock integrity, service access commitments and materials-handling coordination; develops shift relief

Nora's 10% and Seth's 10% pre-close shareholdings do not create post-close rollover. Fred and Adele sell 60% and 20%. The [transition instrument](#) controls the \$500k retention pool and \$225k consultancy. No family connection to existing Sable Harbor names is implied by any new biography.

Authority matrix

Decision	Proposes / evidence owner	Operating decision owner	Capital / escalation
Red Wash mine plan, rehabilitation or operating stop	Mine specialists, Cole and Mari	Mari/RWH; Cole may impose a defined temporary hold	Evan sponsors capital case; SHIH/enterprise authority approves reserved spend
Pale Sun acquisition or downstream partnership	Evan, with commissioned transaction lead and independent specialists	Acquired/partner operator only within qualified scope	SHIH and existing Sable Harbor governance
ARU ordinary operating plan	Gareth, Tessa and operating managers	Nora; Seth retains railway command	SHIH for reserved capital/financing
Train movement, track restriction, locomotive release	Anika, Calvin, Paulina, Silas and qualified staff	Seth and designated qualified railway officers	Capital pressure cannot waive safety restrictions
Taylor receiving/last-mile agreement	Derek/Marta and RWH supply chain	Nora and Mari each own their company's obligations	Arm's-length documented rates; separate owned assets and elimination
Direct uranium custody	Qualified regulatory, customer, insurance, security and operating reviewers	No current ARU/BS&T authorization	OPEN_GATED; independent documented qualification before a later decision
Data/model correction after disputed handoff	Source-record owners and technical specialists	Operating owner handles immediate consequence	Preserve originals and dissent; no silent historical rewrite

A capital owner cannot manufacture operational competence. A model specialist cannot release a movement. A safety stop does not prove every explanatory claim true. These boundaries carry the institutional logic of the Cole Memo and the later custody-timestamp incident into the industrial corporate structure.
