

BTC background, recruitment and Judgment Officer assessment

Document ID: SH-PS-EV-002 | **Version:** 1.0.0

Event/effective date: 2021-05-03 | **Available to case company:** 2021-05-03

Created at: 2026-09-05T22:16:52-07:00 | **Publication cutoff:** 2026-09-05T23:59:59-07:00

Fictional author: Sable Harbor talent-search function and J2 hiring panel

Record origin: SYNTHETIC_COMPANY_RECORD | **Evidence state:** SYNTHETIC_RECONSTRUCTED

Decision state: LOCKED_CANON selection mechanism; LOCKED_DERIVED_IMPLEMENTATION artifact dates

Search origin and BTC boundary

On February 8, 2021, the talent team added Vilander to a deliberate search across claims investigators, journalists, intelligence analysts, security professionals and adjacent operating roles. The team sought people who could separate a source from its claim, preserve contrary evidence and recommend an action before uncertainty disappeared. It did not find a stray report and decide to hire its author. No Sable Harbor security assignment in South Africa is part of this history.

The reconstructed BTC background note records field-to-operations progression, resource-management/private-client experience, a supervisory reference and Vilander's own description of the succession path. These sources support experience and motivation, not an assured future chief-executive appointment. BTC's exact legal name and acronym expansion remain OPEN_GATED for source recovery. No registration number, South African license, client identity or personal contact data is asserted.

Assessment packet: March 18, 2021

The panel presented a fictional contractor-control problem with a missed delivery, conflicting dispatch records, an intact receiving seal and a supervisor who insisted the carrier had arrived late. The candidate received the following deliberately incomplete materials; this packet is participant-visible institutional hiring history, not an evaluator key for the M&A case.

Artifact	What it said	Evidentiary weakness Vilander identified
REC-A1, dispatch extract	Vehicle departed at 06:40	System clock and later manual edits were not established
REC-A2, gate sheet	Receiving clerk wrote 09:25	Handwriting did not establish whether entry was contemporaneous
REC-A3, supervisor note	Carrier delay caused the missed slot	Author had operational context and a commercial incentive
REC-A4, custody photograph	Seal number matched the shipping note	Identity evidence did not establish arrival time or responsibility
REC-A5, amended invoice	Overtime handling charge appeared after dispute	Charge could reflect real labor without proving cause

Vilander refused to choose a culprit from those materials. He separated three questions: whether the load was the expected load, whether the delivery was late, and who bore the contractual consequence. He recommended preserving the load and original records, stopping a punitive charge until receipt facts were checked, obtaining clock offsets and speaking separately with dispatch and receiving. Essential operations could continue under a documented temporary arrangement.

The panel's March 19 discussion recorded a useful disagreement. One interviewer thought he had avoided the difficult decision; another noted that he had recommended an immediate reversible action and specified the evidence needed for an irreversible one. Vilander's read-back identified what would change his recommendation: a reliable independent arrival record, a documented contractual cutoff, or physical evidence requiring a safety hold. He also acknowledged that perfect timing reconstruction might remain impossible.

Appointment and first-year terms

The April 12 offer appointed him a Judgment Officer, with an ordinary supervised induction, access within security/legal boundaries and no line command. Compensation exceeded his expected BTC succession earnings; the exact amount is not a case input. The May 3 induction commissioned a first problem with a named business question, introduced collection support, required a living Problem Book and retained a dissent trail.

The initial performance condition was practical: reduce decision-relevant uncertainty, recognize when the premise failed and perform a verbal handover with read-back. It was not a quota for reports, a promise of promotion or a gamified accuracy score. His first two years required repetitions and institutional trust.

This reconstruction uses the terminology of the controlled [Judgment Officer profession](#) and [Judgment doctrine](#). Those published 2026 documents provide the interpretive framework; their publication dates do not prove that a particular 2021 interface, portal implementation or formal document version already existed.
