

Foundry Field: invoice evidence

SH-FIN-HUMAN-001 · Draft 01 · September 11, 2026

Synthetic exercise record — base scenario, 2027. This is a reconstruction of released accounting rows for review. It is not an original invoice, an executed contract or a request for payment.

The account

Field	Released record
Invoice	INV-base-FF-003-TERM-0
Customer	SYN-CUSTOMER-003
Contract / term	FF-003 / term 0
Business / legal-book code	Foundry Field / SHI
Billing period / due date	January 2027 / February 28, 2027
Original subscription	140 seats; \$145,000 per month; 12 months
Original invoice	\$1,740,000.00 USD

The selected contract has no deployment fee. January billing debits receivables and credits deferred revenue. This packet follows that invoice's collection and credit-loss history; it does not reconstruct all contract revenue recognition or the pooled allowance close.

What happened

Period end	Released event	Amount USD	Ledger AR remaining USD
January 31, 2027	Invoice recorded	1,740,000.00	1,740,000.00
February 28, 2027	Partial receipt	435,000.00	1,305,000.00
June 30, 2027	Remaining AR written off	1,305,000.00	0.00
July 31, 2027	Service credit against written-off claim	14,500.00	0.00
August 31, 2027	Contraction credit against written-off claim	145,000.00	0.00
October 31, 2027	Recovery after writeoff	174,000.00	0.00

The July credit carries reason SLA_SERVICE_CREDIT and debits revenue. The August credit carries reason SYN-AMEND-003 and debits deferred revenue. Both reduce the written-off claim; neither creates a cash refund. The August contract version records 112 seats at \$116,000 per month. Its approval identifier is a synthetic model record, not a signature or evidence of real customer consent.

Reconciliation

Measure	Calculation	USD
Closing ledger receivable	1,740,000 – 435,000 – 1,305,000	0.00
Total modeled collections	435,000 receipt + 174,000 recovery	609,000.00
Total credits	14,500 + 145,000	159,500.00
Surviving written-off claim	1,305,000 – 159,500 – 174,000	971,500.00

A zero receivable does not mean the invoice was paid. The \$971,500 remainder is a derived written-off claim measure, not an asset recognized by this packet. The source invoice's \$609,000 collected total already includes the \$174,000 recovery; adding it again would double-count cash.

Inspect the supporting evidence

Open `reconciliation.xlsx`: Reconciliation contains the formulas; Movements shows all five released history rows; Journal shows all twelve lines for the six invoice-linked events; Terms and credits shows two contract versions and two credit notes; Source register identifies the immutable release and scope. `source.json` retains all original columns of the selected rows, including native IDs. These worksheets and the PDF derive from the same evidence; they are not independent corroboration.

For journal tracing, match the movement's source event ID to the Journal worksheet. January invoice posting uses event `base-01-INVOICE-INV-base-FF-003-TERM-0`. Later events use the exact released IDs shown in the workbook. Each included event's debits equal credits. Contract-wide revenue and allowance entries are excluded, so these twelve lines are not a complete customer P&L or period trial balance.

What is not supplied

No customer address, tax specification, payment instructions, signed contract, bank statement, approval signature or independent collection confirmation is supplied. Do not infer those fields from presentation. Dates are model period ends and the stated contractual due date, not proof of real-world activity. The separate SOC/CCF workline is outside this packet.

Provenance and review boundary

Source: `business-operations-v1.0.0`, published September 11, 2026. Source revision: `57cfa1b1c483ccf1f8b15d82c4cbdadbeef8063e`. Invoice-specific extracts come from `units/foundry-field/` in that release. The package manifest records the verified archive SHA-256, source-member hashes and derivative hashes. The native reporting database is the release's `units/foundry-field/evidence.sqlite3`.

This draft requires review of these exact files before adoption. It changes no financial source, journal, approved artwork or prior release. Its catalog record links this draft to the existing institutional database through `reader_evidence_link`; discovery does not constitute approval.
